

CRACKED BRICK?

Stabilize your foundation and restore your home's integrity with steel foundation piers.

Foundation Services

STEEL FOUNDATION PIERS

Commonly Identified Symptoms

- Stair step cracks in brick
- Interior or exterior cracks in block
- Interior drywall cracks
- Sticking doors, sticking windows
- Sinking porch, sinking foundation
- Separation between bricks and doors
- Separation between bricks and windows
- Horizontal or vertical cracks in brick
- Leaning chimney

Area prepped with bracket secured against footer, ready for installation.

Pier sections are hydraulically driven to the point of refusal.

Homeowners Trust Foundation Services

- Underpin with lifetime warranted steel piers
- Tuckpoint brick with mortar
- Residential & commercial customized options

Stair step, horizontal, and vertical cracks can be signs of settlement.

Installed piers are secure and undetected once the footer is covered.

Causes of Common Symptoms

- Differential settlement
- Shifting, settling soil
- Hydrostatic pressure, expansive soil
- Poor maintenance, poor design
- Deterioration of an older home
- Excavation

Foundation repairs don't have to be scary. In fact, your home can become even stronger than it was when it was first built, with steel resistance pier installation. Call FSCF to schedule a free assessment of your home and gain peace of mind knowing your foundation is secure with lifetime warranted steel piers.
